

Lumen — One-pager

Program & project intelligence platform for multi-country organizations

Lumen helps humanitarian and development networks manage complexity across **organization** → **programs** → **projects** with one shared source of truth. It is designed for teams working with multiple donors, multiple partners, and strong accountability requirements.

The problem

In many organizations, portfolio visibility is fragmented across spreadsheets, emails, and scattered documents. That fragmentation creates recurring pain:

- Slow decision-making because information is hard to consolidate.
 - Financial blind spots (burn rate surprises, delayed reporting, unclear budget vs actual).
 - Limited operational visibility across regions, partners, and workstreams.
 - Risks and compliance tracked inconsistently, making governance harder.
-

What Lumen provides

Lumen brings portfolio-level clarity without losing project-level detail.

Executive visibility

- **Executive dashboard:** active projects, budget totals, utilization, beneficiaries, projects ending soon, and high-risk alerts.

Program performance

- **Program dashboards:** KPIs per thematic area, donor breakdown, risk summary, and project lists.

Project accountability

- **Project detail view:** general information, financials, implementation status, M&E indicators, budget lines, risk register, and documents.

Financial oversight

- Budget vs actual tracking and burn-rate monitoring.
- Spending alerts (slow/fast) and improved readiness for donor reporting.

Geographic overview

- Portfolio view by region and location tables for multi-site delivery.

Risk & compliance

- Risk register and compliance checklist to support governance and data security.

Roles and collaboration

Designed for cross-functional teams, including: Executive Director, Program Manager, Project Manager, Finance Officer, M&E Officer, and Partner/Diocese users.

Who it is for

Lumen is built for organizations that:

- Run multiple programs and projects in parallel (often across multiple countries).
 - Manage several donors and partners with strict reporting needs.
 - Need a shared dashboard for leadership **and** working tools for program/finance/M&E teams.
-

Outcomes you can expect

- Faster portfolio decisions with fewer manual consolidations.
 - Stronger financial and operational control through shared, up-to-date information.
 - Better accountability with consistent project documentation, indicators, and risk tracking.
-

Platform notes (for IT / operations)

- Built with **Next.js**, **React**, **TypeScript**, and a **MongoDB** data layer.
 - A new production environment starts **empty** (no seeded demo accounts/data). Users create their organization and add programs/projects.
-

Call to action

Start using Lumen for your organization's program portfolio.
